Approval body for construction products and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment ETA-10/0352 of 6 July 2015

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	Injection System fischer FIS VL
Product family to which the construction product belongs	Bonded anchor for use in concrete
Manufacturer	fischerwerke GmbH & Co. KG Klaus-Fischer-Straße 1 72178 Waldachtal DEUTSCHLAND
Manufacturing plant	fischerwerke
This European Technical Assessment contains	20 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	Guideline for European technical approval of "Metal anchors for use in concrete", ETAG 001 Part 5: "Bonded anchors", April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011.

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The fischer injection system FIS VL is a bonded anchor consisting of a cartridge with injection mortar fischer FIS VL and a steel element. The steel element consist of

- a fischer threaded rod FIS A or RGM of sizes M6 to M30 or
- a internal threaded anchor RG MI of sizes M8 to M20 or

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for design according to TR 029	See Annex C 1 to C 3
Characteristic resistance for design according to CEN/TS 1992-4:2009	See Annex C 4 to C 6
Displacements under tension and shear loads	See Annex C 7

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

3.5 Protection against noise (BWR 5)

Not applicable.

3.6 Energy economy and heat retention (BWR 6)

Not applicable.

3.7 Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

3.8 General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	—	1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Specifications of intended use

Table B1: Overview use categories and performance categories

Anchorages subject to		FIS VL with …			
		Threaded rod 		Internal threaded anchor RG MI 	
Hammer drilling		all sizes			
Static and quasi static load, in	un-cracked concrete	M6 to M30	Tables: C1, C3 ,C5, C7, C9, C10	M8 to M20	Tables: C2, C4, C6, C8, C11, C12
	cracked concrete	M10 to M20			
Use category	Dry or wet concrete	M6 to M30		M8 to M20	
	Flooded hole[1)]	M12 to M30		M8 to M20	
Installation temperature		-10°C to +40°C			
In-service temper-ature	Temperature range I	-40°C to +80°C		(max. long term temperature +50°C and max. short term temperature +80°C)	
	Temperature range II	-40°C to +120°C		(max. long term temperature +72°C and max. short term temperature +120°C)	

[1)] Only coaxial cartridges: 380 ml, 400 ml and 410 ml

Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2013
- Strength classes C20/25 to C50/60 according to EN 206-1:2013

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions exists
  (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with TR 029 "Design of bonded anchors", Edition September 2010 or CEN/TS 1992-4:2009

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Overhead installation allowed

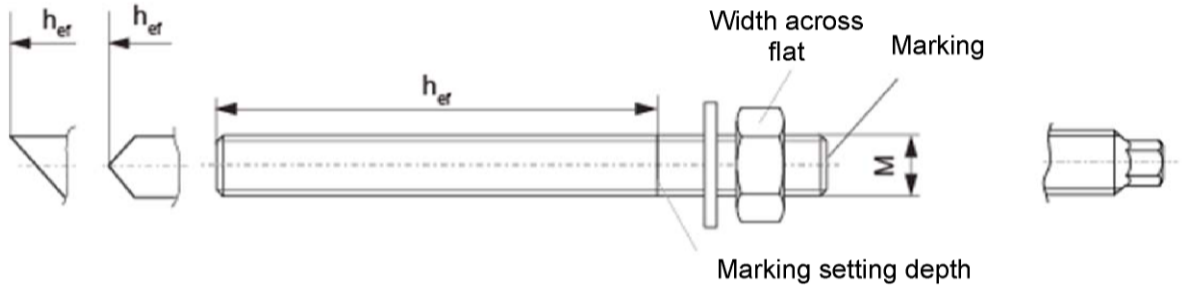
Minimum thickness of concrete member		h_{min}	[mm]	$h_{ef} + 30$ (≥ 100)				$h_{ef} + 2d_0$				

[1] For larger clearance holes in the fixture see TR 029, 4.2.2.1 or CEN/TS 1992-4-1:2009, 5.2.3.1

fischer threaded rods FIS A and RGM



Marking:
Property class 8.8 or high corrosion-resistant steel C, property class 80: •
Stainless steel A4, property class 50 or high corrosion-resistant steel C, property class 50:••

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:
- Materials, dimensions and mechanical properties according Annex A 3, Table A1
- Inspection certificate 3.1 according to EN 10204:2004, the documents should be stored
- Marking of embedment depth

Deutsches Institut für Bautechnik DIBt

Installation instructions part 1
Drilling and cleaning the hole

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables **B2, B3**.
2		$h_{ef} \leq 12d$ and $d_0 < 18$ mm: Blow out the drill hole four times by hand.
		$h_{ef} > 12d$ and/or $d_0 \geq 18$ mm: Blow out the drill hole four times, using oil-free compressed air ($p > 6$ bar).
3		Brush the drill hole four times using an adequate steel brush (see Table **B4**).
4		$h_{ef} \leq 12d$ and $d_0 < 18$ mm: Blow out the drill hole four times by hand.
		$h_{ef} > 12d$ and/or $d_0 \geq 18$ mm: Blow out the drill hole four times, using oil-free compressed air ($p > 6$ bar).

Preparing the cartridge

5		Twist off the sealing cap.
6		Twist on the static mixer (the spiral in the static mixer must be clearly visible).
7		Place the cartridge into the suitable dispenser.
8		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. mortar which is not grey in colour will not cure and must be disposed of.

fischer injection system FIS VL

Intended Use
Installation instructions part 1

Annex B 5

Deutsches Institut für Bautechnik DIBt

Installation instructions part 2
Injection of the mortar

9	 Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole to eliminate voids.	 For drill hole depth ≥ 150 mm use an extension tube.

Installation fischer threaded rods or internal threaded anchors RG MI

10	  Only use clean and oil-free anchor elements. Press the anchor rod or internal threaded anchor RG MI down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must emerge around the anchor element.	
	 For overhead installation support the anchor element with wedges.	 For push-through installation fill the annular gap also with mortar.
11	 Wait for the specified curing time t_{cure} see Table **B5**.	
12	 Mounting the fixture $T_{inst,max}$ see Tables **B2** or **B3**
